

CLINIC CUSTOM-MADE EARPLUGS

Did you know concerts, loud music in clubs, playing an instrument and even listening to loud music on your iPod or mobile can damage your hearing?

EDUCATION:

We can help you understand the risks of excessive noise exposure and why hearing protection is so important.

PREVENTION:

We provide custom-made musician, noise protection and swimming plugs at very competitive prices.

- All plugs are shaped to fit an individual ear – we take impressions of the ears to ensure the earplugs are the right fit for your ears
- **Swimming plugs** prevent water from entering the ear canals and are ideal for children with grommets, swimmer's ear and assist to reduce outer ear infections
- **Noise plugs** can be used for hearing protection or sound reduction for sleep
- All **musician plugs** are designed to preserve the original music signal as much as possible, while bringing the sound down to a safer exposure level.

Two types of plugs are available:

- Standard: 25dB, 15dB and 10dB attenuators (attenuators provide different levels of sound reduction). Available in a range of colours and includes free leather pouch
- Professional: 25dB, 15dB and 10dB attenuators using ER Musician filters (better attenuators for sound quality).
