

CUSTOM-MADE MUSICIAN AND NOISE PROTECTION PLUGS

Did you know concerts, loud music in clubs, playing an instrument and even listening to loud music on your iPod or mobile can damage your hearing?

Education:

We can help you understand the risks of excessive noise exposure and why hearing protection is so important.

Prevention:

We provide custom-made musician and noise protection plugs at very competitive prices.

- All plugs are shaped to fit an individual ear – we take impressions of the ears to ensure the earplugs are the right fit for your ears
- Noise plugs can be used for hearing protection or sound reduction for sleep
- All musician plugs are designed to preserve the original music signal as much as possible, while bringing the sound down to a safer exposure level
- Two types of plugs are available:
 - Standard: 25dB, 15dB and 10dB attenuators (attenuators provide different levels of sound reduction). Available in a range of colours and includes free leather pouch
 - Professional: 25dB, 15dB and 9dB attenuators using ER Musician filters (better attenuators for sound quality)

Costs:

The Clinic provides audiological services at reasonable service costs for clients. Mould costs will vary depending on the style and type chosen.

Private health insurance rebates may be available on selected hearing services.
